Sync OneDrive Files to Computer

You can sync all your OneDrive folders to your computer, or you can specify which folders you'd like to sync if you do not want to sync all your OneDrive folders.

Right-click the **OneDrive** icon in the top right corner of your computer window.

Next select **Preferences**.

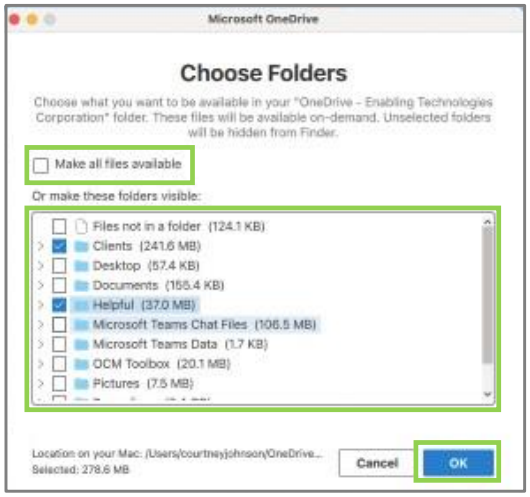

In the Account Dialog Box, select the **Account Tab** and click **Choose Folders**.

When the Choose Folders Dialog Box, select **Make All Files Available** to sync all your OneDrive folders.

If you only want to sync specific folders, select those folders in the **Or Make These Folders Visible** selection area.

Once you are complete, click **OK**.
