CSE Outline

Did you know CSE stands for Council of Scientific Editors? In this style of scientific writing, direct quotations are uncommon. Instead, paraphrasing is used to emphasize ideas over individual authors. The typical structure contains; an abstract, introduction, methods, results, discussion, conclusion, and references. Keep in mind that various rules can affect how a reference is formatted.

Title of Paper 2

Abstract

The abstract is written in approximately 200 words and it is required. The elements that must be covered are the purpose, scope, and major findings of the report. This should not have any references. The reader should be able to understand your abstract without knowing anything about your subject.

Title of Paper 3

Introduction

The third page of your paper should start with your introduction. Make sure you orient your reader on your topic. Then, state the main points of your paper. Lastly, and most importantly, state your thesis.

Discussion

Here is where you may begin your body paragraphs in respect to your paper's main points.
